

# New Machines for Hudson Machine and Tool

## New Machines to expand business

---

Hudson Machine and Tool is excited to announce that they have gotten two new machines, an LB 3000 lathe and a MA 650 vertical mill. These two new machines, on top of the other ones on site, have allowed them to expand their business and became more flexible for their clients.

Having more flexibility is something customers of Hudson Machine and Tool have come to enjoy. This allows customers, who have a wide variety of needs, to have all their jobs taken care of under one roof. Also, most customers have come to realize the high level of quality in all their parts and that is one reason why customers of Hudson Machine tend to stay loyal, lifelong customers. Allowing those customers to feel comfortable, knowing they will be in good hands, is something Hudson Machine has a passionate drive for and something they have continued to show for over 30 years.

Even though Hudson Machine has prided themselves on flexibility, the two newest additions, the LB 3000 lathe and the MA 650 vertical mill have only added to the flexibility. The LB 3000 lathe, built by the dependable Okuma Company, is our first off-center Y-axis turning and milling station. It has a slanted box bed which allows products to have the highest quality and rigidity. The machine is very user-friendly and allows the operator to use higher speeds, which reduces the work time. There are also a wide variety of sizes and tooling options, which helps the machine tie back to Hudson Machine's goal, of providing a wide variety of options and maintaining flexibility for their customers.

In addition to the lathe, Machine is pleased with their new mill, the MA 650. This mill is a state-of-the-art machine and it has large table travels that can handle just about anything that is thrown its way. It is the newest machine on-site and has quickly become a favorite for the mill operators and the functionality has allowed it to become very easy to use.

The combination of these two new machines have only helped production and allowed Hudson Machine to tackle bigger projects that they normally would not have the capabilities to do. Because of this, they are able to expand their business and enter new projects with clients that they once lost due to inadequate machines. Now they are allowed to cover everything under one roof, providing industry-leading quality, at a very competitive price. If you aren't a customer yet, take a minute and give them a call, and let them prove to you what they are capable of.
